

## **What Do I Need To Get Started?**

1. Ideally, locate an area in full sun when possible with a rectangular orientation of north to south with an unrestricted live fresh water supply.
2. If full sun is not possible and you have a choice between morning sun and afternoon sun choose the morning sun.
3. If a north to south orientation is not possible east to west will work with a change to the planting schematic.
4. Clear an area 8' wide by 4' longer than the garden size you choose. For example, if you choose a 4' x 16' Garden Master Bucket Garden System® ideally you will need cleared an area of 8' wide by 20' long. This provides 1' of clear ground space beyond the width of the ground cover which is 6' wide in addition to 1' of cleared ground space beyond the length of the ground cover which will be 1' longer than your garden on both ends. This area should be flat and free of debris.
5. Ideally you should have 3' to 4' of working space around your Garden Master Bucket Garden®.
6. This is also the time to determine if you are going to invest in a greenhouse kit for your garden in the future and if so, what size of greenhouse you will want. If you plan to work your garden in the cold months from the outside of the greenhouse by raising the greenhouse plastic cover then you will need a 4' wide greenhouse kit. However, if you want to work your garden from the inside of the greenhouse you will need a 10' to 12' wide greenhouse. Your greenhouse frame will also act as the support structure for the plant trellis support system. Without the greenhouse structure you will need the "T" trellis support system. Your greenhouse or your "T"

trellis system can be constructed anytime after your garden is installed.

7. Now that you have determined the size of your available area and your garden size you are ready to order your Garden Master Bucket Garden System®. Read the PDF file [Rules For Ordering Your Bucket Garden](#) on the [Bucket Garden](#) page at [www.TheGardenMaster.com](http://www.TheGardenMaster.com). We have attached **sample order invoices** of what you will need in two phases of your Bucket Garden. The second phase is optional but increases your annual production significantly.
8. Order your bedding sand locally per the specifications listed on [www.TheGardenMaster.com](http://www.TheGardenMaster.com) under “Bedding Sand Specifications” and in the amount as listed on the online store. You will also need a pound of 16 penny galvanized nails, fender washers for the nails, phillips screwdriver, PVC cutting pliers, square nose shovel, rake and a wheel barrow.
9. Please allow up 10 days from your order to shipping date for items not listed in # 10 below.
10. Greenhouse Kits, Wiggle Wire Kits and Plastic Cover Kits must be fabricated and are shipped separately and can take longer than 10 days to ship. We have no control over our raw material supplier’s timelines.

Thank you for your interest in the Garden Master Bucket Garden System®!
